

FDC³

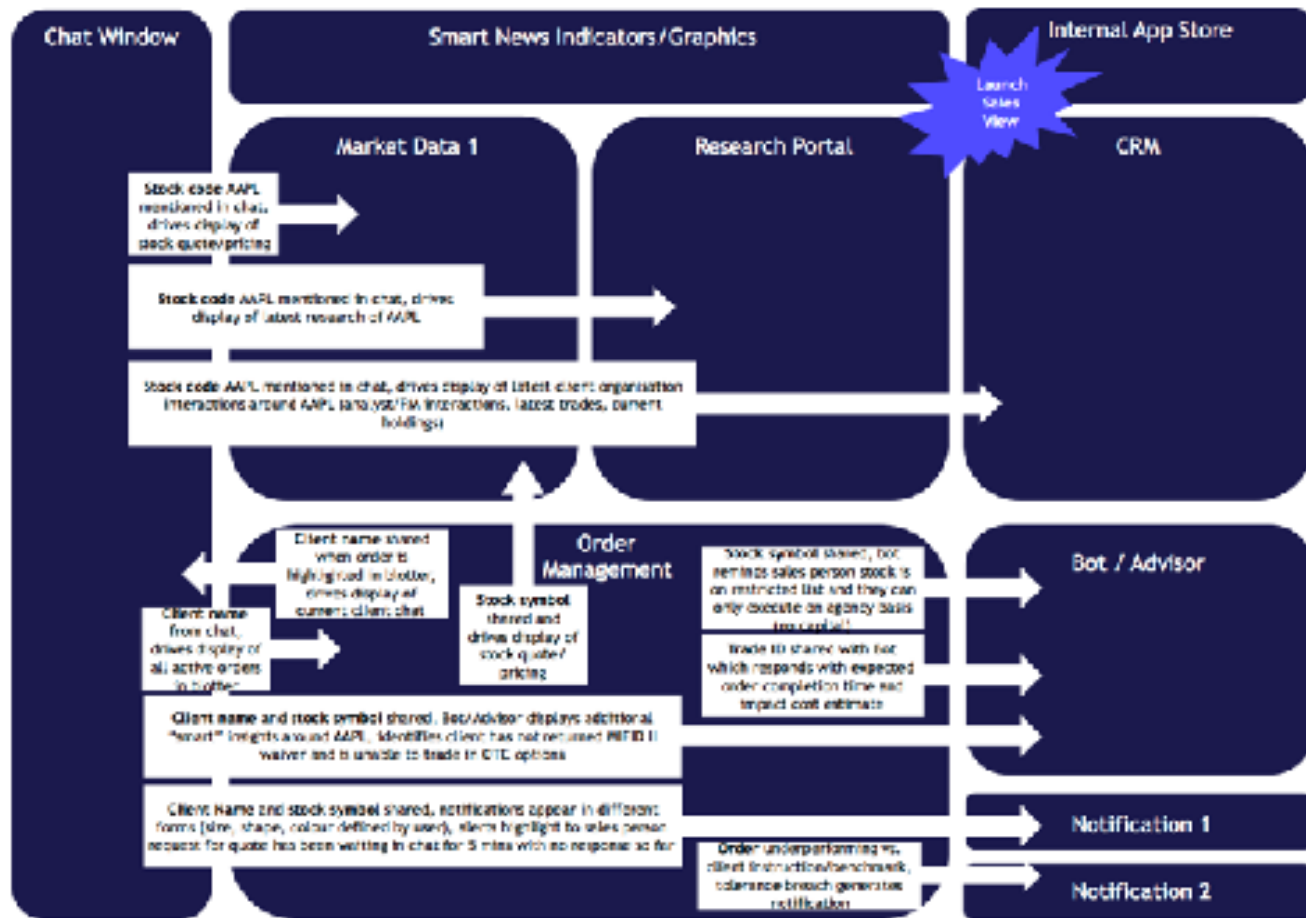

Program Summary

State of Desktop Interop in Finance

- Countless Apps. Internal and Vendor developed
- Digital Transformation
- Many Platforms
- Bilateral interop is expensive
- Humans remain the primary interop layer

Workflows on a Financial Desktop

What is FDC³?

Financial Desktop Connectivity and Collaboration Consortium

- Industry wide standards
- Socialization of ideas, problems and solutions
- Reference Implementations
- Part of the FinOS Foundation
- Founded by OpenFin in 2017
- Open Source - Apache 2.0

Who is participating?

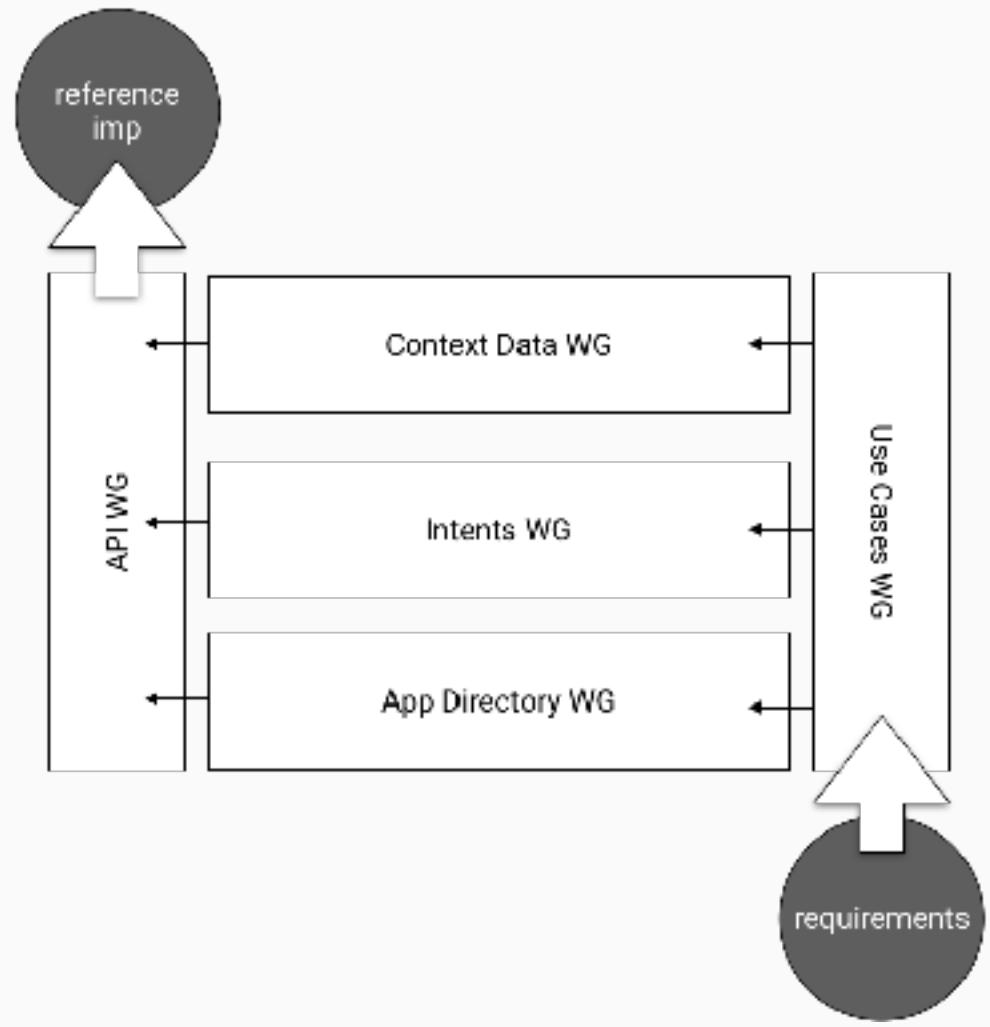

Technical Working Group:

- 40+ Participating Organizations
 - major sell-side firms
 - major buy-side firms
 - cross-industry vendors representing:
 - Financial Data
 - Trading
 - Communication
- Monthly meeting attendance of ~50 contributors
- 50+ members of the FDC3 Github Organization
- Open participation - not exclusive to OpenFin or FinOS

FDC3 Working Groups

- App Directory
 - Providing strong app identity and discoverability across the industry
- Context Data
 - Defining common identifiers shared across the desktop
- Intents
 - Creating common identifiers for financial workflows
- API
 - Specifications of baseline APIs for interoperability
- Use Cases
 - Identifying and detailing critical use cases for interoperability

Working Group Flow
